

Open Claw Capital

Investment Guide

Earn fixed daily returns on USDT. Your full principal comes back at maturity.
Simple, predictable, and managed by real traders and bots.

openclawcapital.xyz

Put your USDT to work

Open Claw Capital is a Telegram-based investment platform. You lock Tether (USDT) into a fixed plan, receive a daily return every 24 hours, and get your original deposit back when the plan ends. No hidden fees, no automatic reinvestment, and no surprises.

Daily payouts

A fixed portion of your locked amount lands in your balance every day.

Principal returned

At maturity your full original deposit is released back to you.

No hidden fees

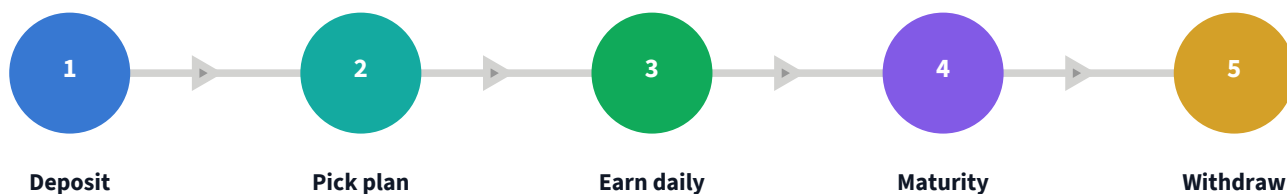

What the plan table shows is exactly what you receive.

Where the returns come from

Open Claw uses proprietary trading bots and algorithms that scan the markets 24/7. Experienced fund managers supervise the system and control risk. A share of the trading profits is paid to investors as fixed daily returns. The rate and duration are locked in before you invest, so you always know what to expect.

How it works in 5 simple steps

The journey from deposit to withdrawal is straightforward. You control every decision: reinvest, withdraw your available profit, or let it sit.

What each step means

- Deposit - Send USDT on your chosen chain. An admin reviews and credits your balance.
- Pick plan - Choose a duration that fits you, from 30 to 120 days.
- Earn daily - Every 24 hours your daily return is added to your balance.
- Maturity - At the end of the duration your locked principal is released.
- Withdraw - Request your balance or start a new plan. Withdrawals need KYC and a PIN.

The four investment plans

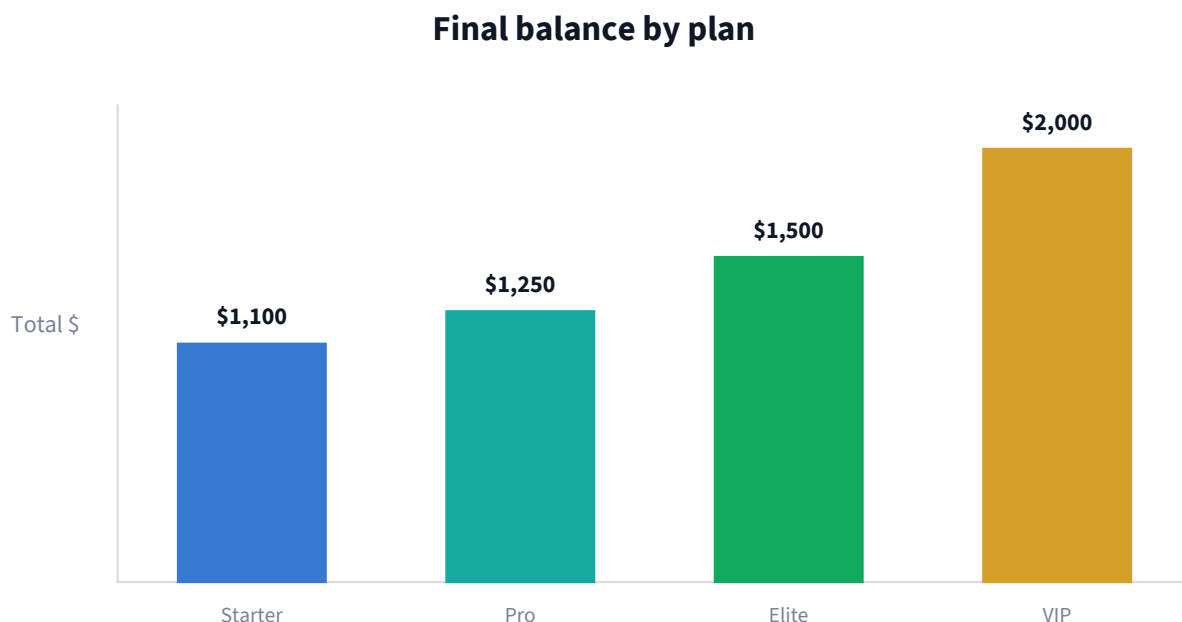

Each plan has a published daily return, total return, and minimum entry. The longer you lock your money, the higher the total return.

Plan	Days	Daily ROI	Profit	Total	Min	Max
Claw Starter	30	0.3333%	10%	110%	\$10	\$10,000,000
Claw Pro	60	0.4167%	25%	125%	\$100	\$10,000,000
Claw Elite	90	0.5556%	50%	150%	\$500	\$10,000,000
Claw VIP	120	0.8333%	100%	200%	\$1,000	\$10,000,000

For example, a \$1,000 Claw Starter plan earns \$100 profit over 30 days and returns the full \$1,000 principal on day 30. Total received: \$1,100.

What \$1,000 looks like in each plan

The chart below shows the final balance for a \$1,000 investment held to maturity. The colored part of each bar is your profit; the bottom is your principal coming back.

Worked example: Claw Starter with \$100

Daily rate: 0.3333% of \$100 = \$0.3333 per day.

Over 30 days: $30 \times \$0.3333 = \10.00 profit.

Day 30: \$100 principal is returned.

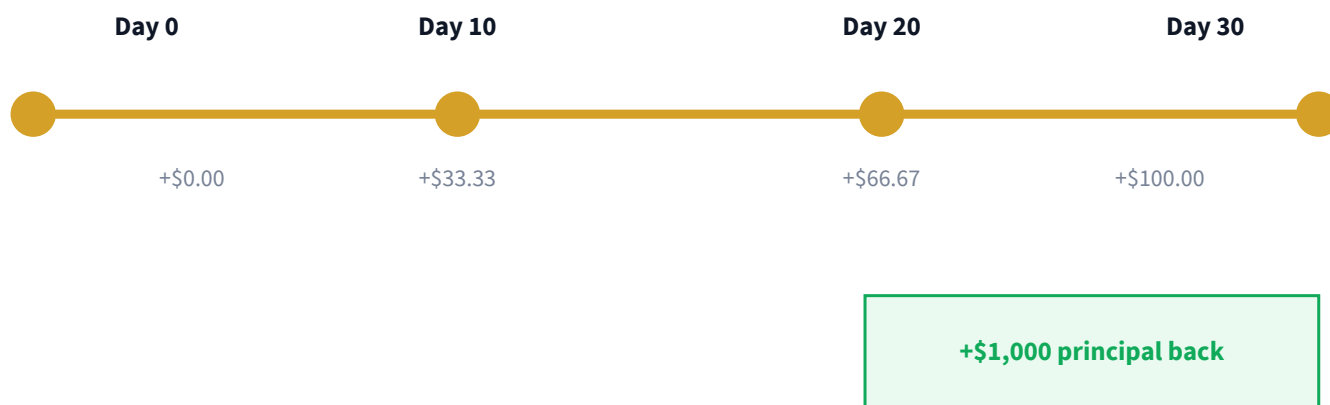

Total received: \$110.00.

The same math applies to every plan. Longer locks mean a higher total return.

Principal return at maturity

When your plan finishes, the locked principal is returned to your balance in full. Your daily profit has already been paid throughout the plan, so the principal return is the final piece.

30-Day Starter example - \$1,000 investment

Important to remember

- Plans are locked for the full duration. You cannot withdraw the locked principal early.
- Daily profit in your balance is available immediately.
- You get a Telegram alert when your plan matures.

Earn when your network invests

Invite friends and earn commissions across ten levels. You earn when they invest, and when their invites invest. Commissions are paid from the platform side, not deducted from the investor.

Commission rates by level

Levels 1-5	Levels 6-10
Level 1: 10%	Level 6: 5%
Level 2: 8%	Level 7: 4%
Level 3: 6%	Level 8: 4%
Level 4: 5%	Level 9: 4%
Level 5: 5%	Level 10: 4%

Example: if three friends invest \$1,000 each, you earn \$100 from each (10% of \$1,000). If one of them invites someone who also invests \$1,000, you earn \$80 (8% at Level 2).

Security and how to start

Withdrawal protection

- Complete KYC before any withdrawal.
- Set a four-digit PIN in your profile.
- Three wrong PIN attempts lock withdrawals. Contact support to unlock.
- All withdrawal requests are reviewed before being sent.

Quick start

- 1 Open the Telegram bot and tap the mini app.
- 2 Complete your profile and submit KYC.
- 3 Generate a deposit address, send USDT, and wait for approval.
- 4 Tap Invest, pick a plan, enter an amount, and confirm.
- 5 Watch your balance grow daily. At maturity your principal returns.
- 6 Request a withdrawal whenever your balance is available.

Disclaimer: past performance and fixed-rate projections do not guarantee future results. All investments involve risk. Please read the platform terms and only invest capital you can afford to lose.
